

Alexander M Vallorosi
FE550 Data Visualization
4 April 2018

Summary

For this assignment, I decided to take a look at my computer usage habits via the data that I already collect using a program on my computer. I visualized this data in terms of productivity, using a stacked bar chart to plot Very Productive through Very Unproductive data during each day of usage last week, as well as drilling down into each hour of usage. I also visualized the categories which I browsed while on the computer to give a good idea of what tasks I was performing using the computer. Also, the heat map visualization which I included, can be very useful to show peak productive or unproductive times during a week, month, year, or even hourly during a day.
